

Life as a Graduate of Welding Engineering

What do you find interesting? Sitting around a dinner table discussing an offshore oil and gas contract for \$200 million, maybe its developing a welding repair process for a single crystal turbine blade that would save your company \$250 000 per blade, or possibly meeting with the US military to develop a new weldable armor plating. These and countless others are the possibilities that are within the grasp of a graduate student of a welding engineering program. Welding engineers make up an elite group of people with an expertise that is broad and specific at the same time.

The unique course and research work that accompanies a student in welding engineering allows the them access to some of the most hi-tech, cutting edge technology available in industry. The diverse experience that is associated with the degree second to none.
